

F700 SEMI AUTOMATIC SLEEVE WRAPPER

- 700mm solid sealing jaw
- Maximum film reel 680mm
- Teflon coated with knife cut
- 600 x 400mm tunnel aperture
- Variable speed steel mesh belt conveyor
- Variable temperature controls
- Mechanical pack clamp
- Twin push button start cycle
- Fully guarded

The F700 is designed and built as a monobloc combination unit. It has been designed to be easy to use and has a new design of shrink tunnel to achieve 14kW power consumption. The space saving design allows the product to be transferred directly from the outfeed of the sealer onto the shrink tunnel mesh belt which creates a smooth transfer for unsupported collations and in turn, increases production output. The machine features top powered film feed drive and an adjustable product pusher. This allows the operator to collate the next pack whilst the machinery completes the packaging process. The machines support base board, trayed and unsupported product handling.

Simple and intuitive control panel with full control of all machine functions

Adjustable pack former with twin button cycle start
